Trace Construction

VisualEvidence-Set

Dataset Card

channel evidence

"bbox": "top detection 'pot' has score 0.43 at box [60.0, 116.0, 106.0, 152.0]."

action intent

Transport, place, finish the manipulation step "Pick the pineapple out of pot"

visual_rationale

At the place stage, consult edge and relation because **the object is relatively close, and detailed coordinates of the object are needed** (bbox: top detection 'pot' has score 0.43 at box [60.0, 116.0, 106.0, 152.0].) and **the final destination is relatively far away, so geometric information is needed** (relation: target='pot' at normalized center (0.33, 0.30), goal_anchor=bottom, goal_dist=0.439).....

stage	selected evidence	utility rank
approach	["bbox", "relation"]	[bbox, relation, edge, motion]
